President & CEO,  
Rhode Island BCBS

# About Pearl Health

---

## We help primary care organizations succeed in value-based care

We're a team of doctors, technologists, and health plan specialists with a passion for enabling our provider partners to deliver better care and reduce health system costs. Our executive team has deep experience in payor and provider technology, in addition to diverse industry backgrounds offering fresh perspectives.

At Pearl Health, our mission is to democratize access to value in healthcare. We seek to empower primary care practices to deliver better

quality care for their patients at a lower cost via a physician enablement technology platform and a value-based payment model — starting with Medicare's ACO REACH Model.

Our platform and services are designed to make it easy for providers to continue delivering quality care for their patients while maximizing revenue for their practices. We do this by providing simple financial reporting, visibility into patient panel health, and recommendations to allocate time and resources to deliver care to patients who need it most.
